Respect, Love, and Education Through Christ

Mrs. Flamio's Third Grade class participates in independent research projects on a science topic of their choice to present to their peers. The reports are presented in the form of poster board displays and power point presentations. Each Thursday, two students present their information to the class and answer questions about their topics to interested peers. Projects began in October and continue through the month of January. Some questions students researched were: What kind of habitat does a tropical fish need to survive? How does a car work? What is the difference between an animal and plant cell? How does a flame thrower operate? How do solar panels work? What are galaxies? How does the circulatory system work? What type of frog is the rarest? How is nuclear energy made? How long can mealworms live? The students are as equally excited to present their topic as they are to learn new information from each other.
